

**AMENDMENTS TO THE SPECIFICATION**

Page 2, amend the paragraph spanning pages 2 and 3 to read:

A first example thereof is known from EP 1.099.449. The plunger body is hereby first injection-moulded out of hard plastic in a mould impression or cavity, after which a piston body made of a softer plastic is then formed on the plunger body by enlarging said mould impression near the front end of the formed plunger body and by then injecting the softer plastic in the space which has thus become available.
